DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

2. Claims 13-18 are rejected under 35 U.S.C. 101 because the claim is directed to a recording medium storing nonfunctional descriptive material.

Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical "things" nor statutory processes. See, e.g. Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. See MPEP 2106.IV.B.1.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Maruyama et al.

Application/Control Number: 10/628,470

Art Unit: 2621

Maruyama et al discloses a video recording/reproducing apparatus that shows all the limitations recited in claims 1, 7, and 13, including the feature of serially reproducing video data and still image data from the recording medium (See Maruyama et al's Figure 25), and the feature of generating the serial reproduction digital video data by arranging the selected still image data sets and/or digital video data sets in predetermined order as specified in the present claims 1, 7, and 13. (See the capability of reproducing the video and the image data using program chain information designating respective cell reproduction orders as shown in Maruyama et al's claim 1).

With regard to claims 2, 8, and 14, the feature of the predetermined recording unit being a folder storing still image data sets and/or digital video data sets as specified thereof is present in Maruyama et al. (See Maruyama et al's Figure 25, components 1022, 1023).

With regard to claims 3-6, 9-12, and 15-18, the feature of the predetermined order being based on accompanying information attached to the still image data sets and or digital video data sets as specified thereof is noted to be inherently present in the cited reference of Maruyama et al. Because, the program chain information which controls the cells reproduction order of the reproduced data from the recording medium as disclosed in Maruyama et al's reference is noted to be user definable. That is, one of ordinary skill in the art would readily recognize that the user can always define the reproduction order based on any criteria as desired including any information attached to the still image data and/or the video data sets as claimed.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Morita et al discloses a video/still image data recording/reproduction apparatus.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bob Chevalier whose telephone number is 571-272-7374. The examiner can normally be reached on MM-F (9:00-6:30), second Monday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thai Tran can be reached on 571-272-7382. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
